**Abstract of JP11088672**

**PROBLEM TO BE SOLVED:** To allow a photographer to designate a finish at reproduction, while confirming the finish on a monitor in the case of reproducing digital image data as a photo print or a CRT display image.  
**SOLUTION:** Image data acquired by an image-pickup means 101 of a digital camera 1 are displayed on a display confirmation means 102, and a finish setting means 103 receives a finish condition set by a photographer based on a display image, and the image which reflects the setting contents is displayed again on the display confirmation means 102. Finishing information finally confirmed through the repetition of setting and re-display is added to the image data by a finish information addition means 104, and the resulting data are given to a labo system 2 via a cable interface and medium. An image-processing means 302 of the laboratory system 2 applies image processing to the image data, based on the finish information and reproduces the resulting data as a photo print.
